Abstract of JP 10045562 (A)

PROBLEM TO BE SOLVED: To prepare a cosmetic having synergistically enhanced antimicrobial actions without not only manifesting the primary irritation and sensitizing properties to the skin but also imparting an unpleasant feeling such as a sharply stabbing pain, a tingling pain or a prickling pain thereto when using the cosmetic. **SOLUTION:** This antimicrobial and low-irritant cosmetic comprises one or more of antimicrobial metal-supporting ceramics and one or more plant extracts having antimicrobial actions used in combination. Silver, copper and zinc are preferred as the antimicrobial metal to be supported. A calcium compound, zinc oxide, zirconium oxide, titanium oxide, magnesium oxide, aluminum oxide, silicon oxide, talc and zeolite are preferred as the ceramics.; The respective amounts of the blended ingredients are sufficiently about 0.1-10.0wt.% antimicrobial metal-supporting ceramics and about 0.01-20.0wt.% plant extract having the antimicrobial actions.
